

Balloon Sinuplasty - A new Breakthrough in the treatment of Chronic Sinusitis

Balloon sinuplasty is a breakthrough treatment with regard to **chronic sinusitis** treatment. It is really an Food approved procedure that is found to be less invasive compared to other surgical techniques. It works on the same principle as balloon angioplasty used for the treatment of blocked heart ships.

Sinusitis is swelling of sinuses that occurs because of contamination, allergy or auto-immune issues. Sinus openings tend to be blocked which usually severely impacts the normal mucous drainage. The primary symptoms of sinusitis are headaches, breathlessness, nausea, eye sores, facial pain, nasal congestion, sleepiness, uncommon discharge of mucus from the nose, loss of sense of smell and taste.

- Balloon sinuplasty is performed under local or even general anesthesia to prevent any hardship to be able to the patient.
- This method involves the development of a wire catheter through the sinus openings which moves towards the blocked passage.
- A little balloon is linked in the front of the catheter.
- The balloon is gradually inflated to be able to clear the blocked site.
- During the process, additionally, it pushes the bone tissue lining the starting that quickly reforms in to a great gap.
- Then the balloon is deflated and removed.
- Any pus or mucus is cleared out there with the aid of an irrigation catheter.
- In the event that the patient has the presence of polyps next this procedure may be along with septoplasty or partial turbinate reduction.
