

Sinusitis Overview

Sinusitis is the inflammation of the air filled nasal cavities in the head called the nose. When your sinuses will get obstructed inflammation can occur. The **blocked sinuses** will lead to build up of pus as well as mucous which then becomes a very nutritious ground for bacteria. Probably the most common cause of sinus blockage is sinus polyps, common cool, sensitive rhinitis, or deviated septum.

Types of Sinusitis

Acute Sinusitis- This kind of sinusitis requires a sudden onset of runny nose, clogged nose, sneezing and facial pain. Serious sinusitis signs last from 7 days to be able to 4 weeks.

“ *Sub acute sinusitis- Sinus symptoms which lasts for 4 to 8 weeks.* ”

Chronic Sinusitis- Sinusitis Signs Which Last for 8 Weeks or Longer

Recurrent sinusitis- Recurrent nose attacks within a year.

Causative Factors

Sinusitis can be triggered by several factors including impaired immune system and smoking. Exposure to an environment with bacteria, virus, fungi, airborne dirt and dust, and different allergens can also trigger inflammation of the sinuses. Actually a common cold can cause sinusitis. Polyps which causes nasal blockage can also bring about the onset of sinusitis.

Common Signs and Symptoms

There are different signs and symptoms associated with **sinus infection**. The most typical signs are:

Throbbing facial pain that is caused by the pressure because of accumulated air and pus in the nose cavities.

- Clogged nose with nasal discharges.
- Nasal discharge that progress from clear in order to yellow or greenish discharge is evident in sinusitis.
- Hearing impairment may also develop as a result of accumulation of mucus in the oral tube.

Impairment Inside the Feeling of Smell

- Sinusitis may also trigger temperature and fatigue.
- Sometimes it may also cause dental difficulties which outcomes to be able to bad inhale or perhaps halitosis.

Diagnostic Test

The technology used to identify a sinus infection is becoming more and more current and sophisticated. Diagnostic test includes mucus tradition, endoscopy of the nose, X-rays, CT scan, blood work ups, as well as allergy assessments.

- Physician will also review all the manifesting symptoms and perform a thorough physical assessment before proceeding to any kind of diagnostic test.
- Problems will often palpate your sinuses and feel for any signs of tenderness.

Treatment

The effectiveness of the treatment of a sinus infection can vary greatly from person to person. A few sinus patients may find utmost relief from prescription medications such as nasal sprays, antibiotics, decongestants, and antihistamines. But these medications may also result to unwanted adverse reactions. Sinus patients who are not comfortable with prescription medication may also consider using home remedies such as drinking natural mixtures and steam inhalation.
